
Information for Authors

The *Journal* is published for the benefit of the members of the Louisiana State Medical Society. Manuscripts should be of interest to a broad spectrum of physicians and designated to provide practical information on the current status, progress, and changes in the field of clinical medicine. The articles published are primarily original scientific studies but may include societal, socioeconomic, or medico-legal topics.

PREPARATION OF THE TYPESCRIPT

- Print in black ink using a standard upright typeface using 12 point size. Margins must be 1 inch on all sides using left justification; avoid end-of-line hyphens; number all pages consecutively, starting with the title page. Double space the manuscript. Unless previously arranged with editor, limit the length of the manuscript to 10 pages.

STYLE CONVENTIONS

1. **Acronyms, abbreviations, and initialisms** should be used sparingly. If used, the shortened form should be added in parenthesis immediately following the first mention of the expanded form.
2. **Units of Measurement** should be entered in conventional units. If essential, Système International (SI) units may be added in parenthesis immediately following the conventional expression.
3. **Drug Names** should be entered in the generic form. If the proprietary name is especially relevant to the study, it may be added in parenthesis immediately following the first mention in the generic name. A generic name is lowercased; a proprietary name is capitalized.
4. **Laboratory procedures** which are unusual should show normal values in parenthesis immediately following the reported value.
5. **Names of organisms** should include full genus and species at first mention; the genus name may be abbreviated at later mention the same organism; capitalize genus; lowercase species; set entire name italic.
6. **Statistical statements** should have an explanation of their meaning added parenthetically.
7. **Citing a reference entry** should be superscript arabic numerals inserted at a logical site in the sentence; place immediately after a word or mark of punctuation; cite reference entries in the main text, in tables, and in legends, but not in the abstract.

PARTS OF THE MANUSCRIPT

1. **Title Page:** The title page should carry the following information: (1) the title of the manuscript, which should be concise, clear, and informative. Do not use abbreviations in the title; (2) the full name of each author together with their highest academic degree relevant to the subject matter of the paper. List authors in the order of magnitude of their contribution. List as authors only those who have contributed substantially to the design or conduct of the study or to the preparation of the manuscript; (3) the department and institution of each author at the time the study was completed; (4) the current institution affiliation of each author if its changed; (5) explanatory notes that give: (a) a brief biographical note for each author indicating academic appointments, hospital affiliations, and practice location; and (b) the name and address of the author to whom requests for whom requests for reprints should be addressed, or a statement that reprints will not be available.
 2. **Abstract and Keywords:** The abstract is a brief recapitulation of the purpose of the paper, the methods and subjects used, and the conclusions. Avoid use of acronyms, abbreviations, initialisms; do not cite references, tables, or figures (the abstract must stand alone); limit the abstract to 150 words. On the lower part of the same page, list three to five key words or short phrases which will assist indexers. When possible, use terms from *Medical Subject Headings* as used in *Index Medicus*.
 3. **Main Text:** Avoid highly technical expressions and jargon; the article should be easily understood by the general readership. Use subheads freely to break the typographic monotony, make the paper easier to read, and fortify the sequence the author's argument. Commonly used subheads are: introduction or background, methods and subjects, results, discussion, and conclusions.
 4. **Acknowledgements:** Acknowledgments must be made for financial assistance (grants, equipment, drugs) and for the use of previously published material. Acknowledgement may be made for technical assistance and intellectual participation in conducting the study or preparing the manuscript. The recognition
-

of assistance should be state as simply as possible, without effusiveness or superlatives.

5. **References:** Each source cited in the main text, tables, or legends must be listed in the References section; and, conversely, all entries in the References section must have been cited in the main text, tables, or legends.

- A reference entry for an article in a journal is composed of the following three sections: (1) name of the author, (2) title of the article, and (3) the location of the article
- The three sections of a reference entry for a book or monograph are: (1) name of the author, (2) title of the book or monograph, and (3) facts of the publication.
- Name of the author (journal article or book): give last name, initials, seniority indicator; list one, two, or three authors; if more than three authors, list the first three and follow with "et al;" separate the names with commas.
- Title of a journal article: capitalize in sentence style.
- Title of a book or monograph: capitalize in headline style; italicize.
- Location data for a journal article: give abbreviated name of journal, year of publication, volume number, first and last page. Abbreviate name of journal in accordance with style used in *List of Journals Indexed in Index Medicus* (nlm.gov/tsd/serials/lji.html); italicize name of journal to indicate that the name of the journal is to be printed italic; do not omit digits from first or last page numbers.
- Publication data for a book or monograph: city where published, name of publisher, year of publication, first and last pages.
- The following examples illustrate the reference style adopted by the *Journal* for (1) a reference to an article in a journal, (2) a reference publication, (6) a reference to a presentation at a societal meeting, (7) a reference to an article in a newspaper, (8) a reference to a book which has been accepted for publication but has not yet been published, and (9) a reference to a website:

- (1) Brush JE Jr, Cannon RO III, Scchenke WH, et al. Angina due to coronary microvascular disease in hypertensive patients without left ventricular hypertrophy. *N Engl J Med* 1988; 319:1302-1307.
- (2) Hajdu SI. *Pathology of Soft Tissue Tumors*. Philadelphia, Pa: Lea & Febiger; 1979:60-83.
- (3) Robinson BH. Lactic acidemia In: Scriver CR, Beaudet AL, Sly WS, et al (editors). *The Metabolic Basis of Inherited Disease*, 6th edition. New York: McGraw-Hill; 1989:869-888.
- (4) American College of Physicians. Comprehensive functional assessment of elderly patients. *Ann Intern Med* 1988;109:97-72.
- (5) Office of Smoking and Health. *The Health Consequences of Involuntary Smoking: A Report of the Surgeon General*, 1986. Rockville, Md: US Department of Health and Human Resources; 1987:97-106 [CDC publication 87-88398].

(6) Schacter RK, Arluk J. Flexural microflora in patients with psoriasis. Presented at the Annual Meeting of the American Academy of Dermatology, New Orleans, La, December 4-6, 1992.

(7) Altman LK. Experts change guides for using drugs for HIV. *New York Times* June 27, 1993:1,23.

(8) Levine S, Walsh D, Amic B, et al (editors). *Society and Health Foundations for a Nation*. London: Oxford University Press [in press].

(9) American Board of Internal Medicine. Diplomates certified as of 01/22/01. <<http://www.abim.org/info/states.htm>> (accessed 20 February, 2001).

- Type each reference entry as a separate hanging paragraph; number the entries consecutively in the order cited; do not list alphabetically; **double-space reference entries**; and punctuate as shown in the examples listed above.
 - **Limit references to 15** unless special arrangements have been made with the editors.
 - Personal communications and unpublished data should not be cited or entered in the list of references, but, if essential, may be integrated parenthetically with the text.
 - The authors are responsible for the accuracy of the citations and the reference entries. The authors are expected to have read and verified all of the listed references.
6. **Tables:** A table consists of a caption (table number and title), the body of the table, and footnotes. Tables should be self-explanatory and should supplement, not duplicate the main text. All tables should have been referred to in the main text. Type each table on a separate piece of paper; number tables in the order first cited; provide a title; avoid vertical rules; consult recent issues of the *Journal* for examples. **Limit tables to one table (or figure) per 1,000 words of text.**
7. **Illustrations:** Illustrations include graphs, charts, maps, line drawings, photographs, and other art work. All illustrations should have been referred to in the text. An illustration and its legend must stand alone. Illustrations should be professionally prepared (photocopied or computer-generated figures, if of professional quality, may be accepted at the option of the editors). Digital images should be saved as .tif files at 300 DPI or as a Photoshop file. **Limit illustrations to one figure (or table) per 1,000 words of text.** Consult recent issues of the *Journal* for examples of figures number the figures in the order first cited in the text.
8. **Legends:** A legend consists of a figure number, a description of the figure, an explanation of any notations on the figure, the techniques used, and an acknowledgment of the source if the figure has been previously published. Type legends on a separate page; use block paragraphs.
-

-
9. **Cover Letter:** The manuscript must be accompanied by a cover letter which: (1) requests consideration of the paper for publication in the *Journal*; (2) states that the paper has not been published previously and is not currently being considered by another journal; (3) acknowledges any potential conflict of interest; (4) states that the final version of the manuscript has been read and approved by all of the authors; (5) designates one of the authors as corresponding authors and lists his full mailing address, phone number, fax number, and email address; and (6) has been signed by all authors.
 10. **Permissions:** Written permission must be obtained from: (1) any individual who is recognizable in text or illustration; (2) the copyright owner of any previously published matter (text, table, or figure) which is to be incorporated in the manuscript; (3) any individual mentioned in the acknowledgements, and (4) any individual quoted from personal contact. If human research was involved, a report from the Institution Review Board should be attached.
 11. **Copyright Transfer:** Authors will be asked to sign a form transferring to the *Journal* any copyright ownership of any article accepted for publication. Such articles may not be republished, in whole or in part, without written permission from the editors.
 12. **Galley Proofs:** Galley proofs will be emailed to the corresponding author for review, correction, and approval before publishing. All authors are expected to have read the final draft of the manuscript before it is submitted. The corresponding author will be responsible for the validity of the content and the accuracy of the typescript and for compliance with published style conventions of the *Journal*.
 13. **Editorial Assistance:** For more information or questions, please contact the *Journal* at journal.lsms.org or 225-763-2308.
